

Draft Model of HIV Nursing Care

Eileen Nixon and Steve Callaghan on behalf of:

Steering Group: Sarah Barber, Garry Brough, Michelle Croston, Liz Foot,
Jennifer Kendrick, Martin Jones, John McLuskey, Linda Panton, Kirstie
Salthouse, Moses Shongwe

Conflict of Interest

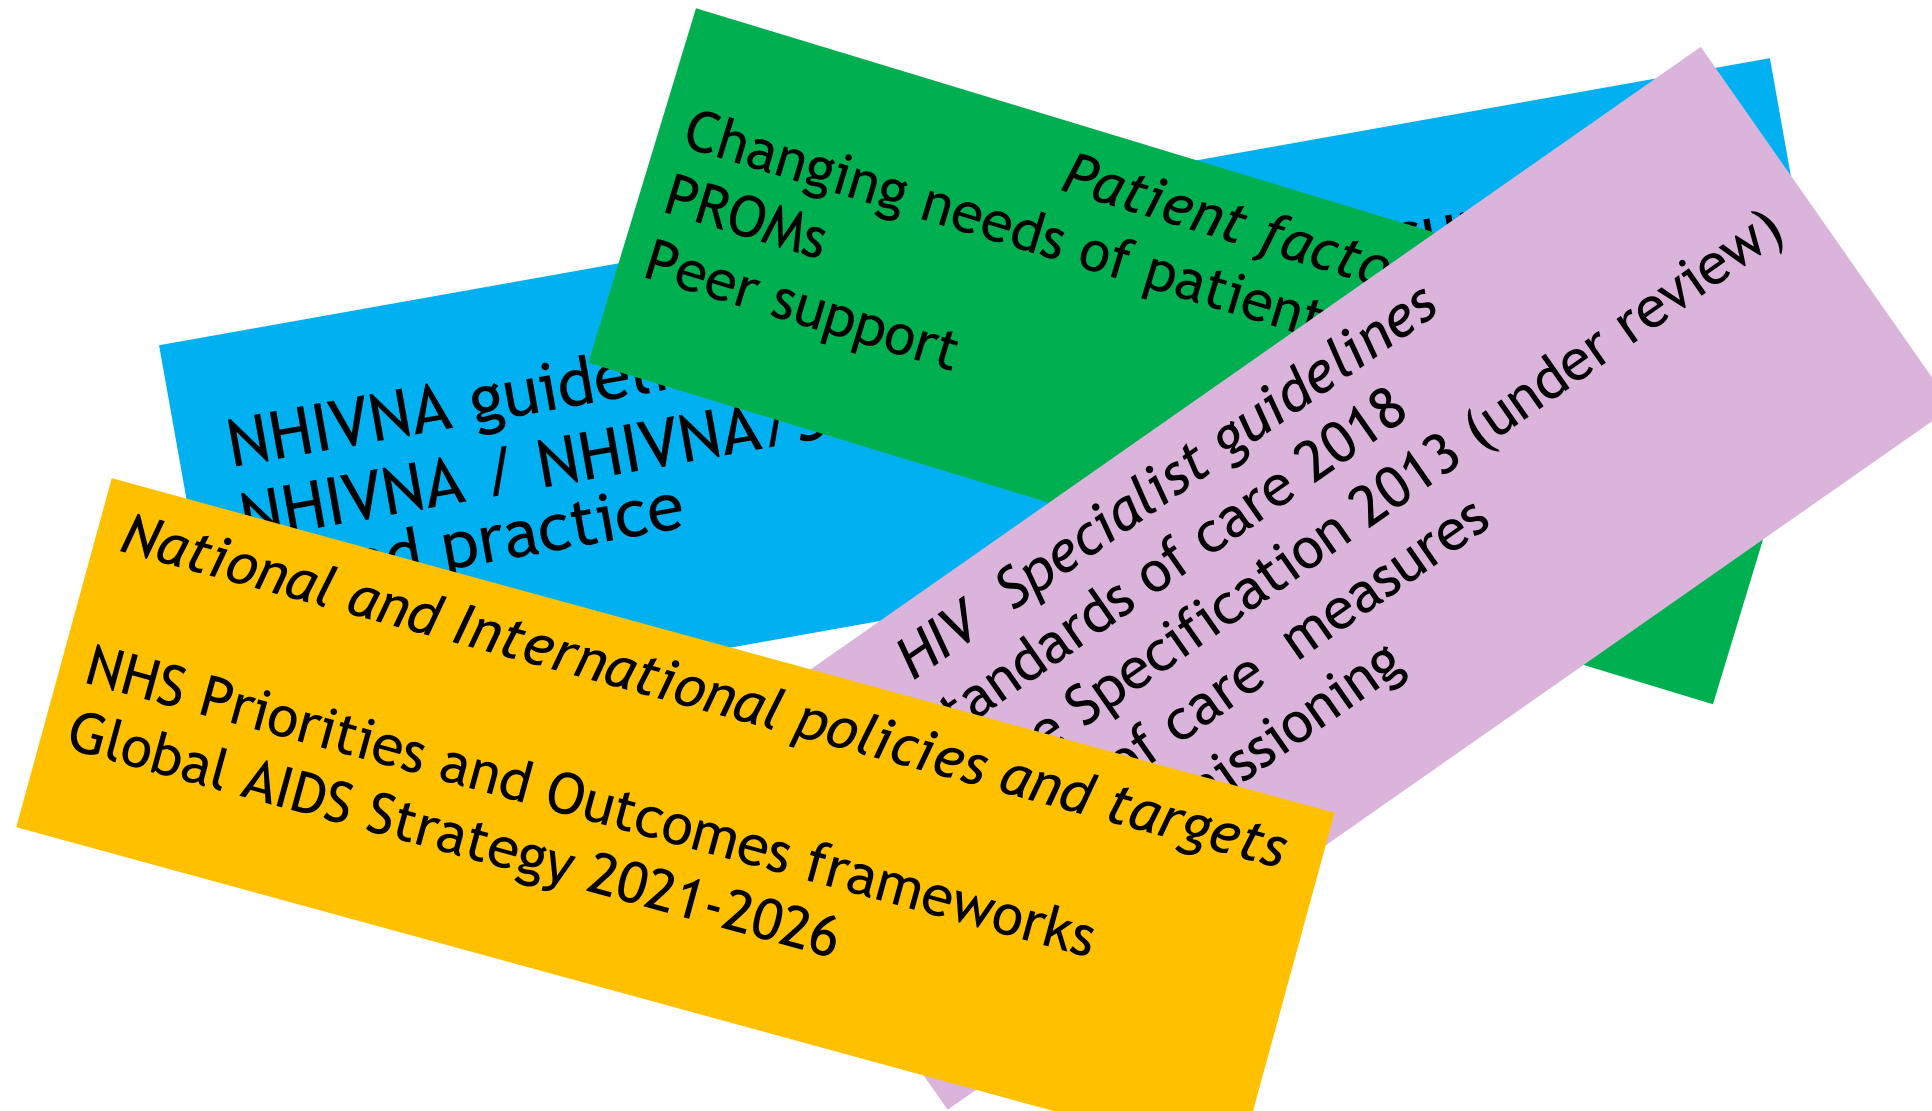

In relation to this presentation I declare that I have no conflict of interest

Speakers are required by the Federation of the Royal Colleges of Physicians to disclose conflicts of interest at the beginning of their presentation, with sufficient time for the information to be read by the audience. They should disclose financial relationships with manufacturers of any commercial product and/or providers of commercial services used on or produced for patients relating to the 36 months prior to the event. These include speaker fees, research grants, fees for other educational activities such as training of health professionals and consultation fees. Where a speaker owns shares or stocks directly in a company producing products or services for healthcare this should also be declared. Finally, other conflicts of interest including expert functions in health care or healthcare guidance processes should be declared (eg if the professional is a member of a health board). The Federation considers it good practice to also make speakers' disclosures available in digital format(s) relating to the educational event.

Why have a Model of HIV Nursing care?

1. Maturing as a speciality
1. Build on / collate the work already done by NHVNA and HIV Nurses
3. Changing commissioning climate

Underpinning policy/documents

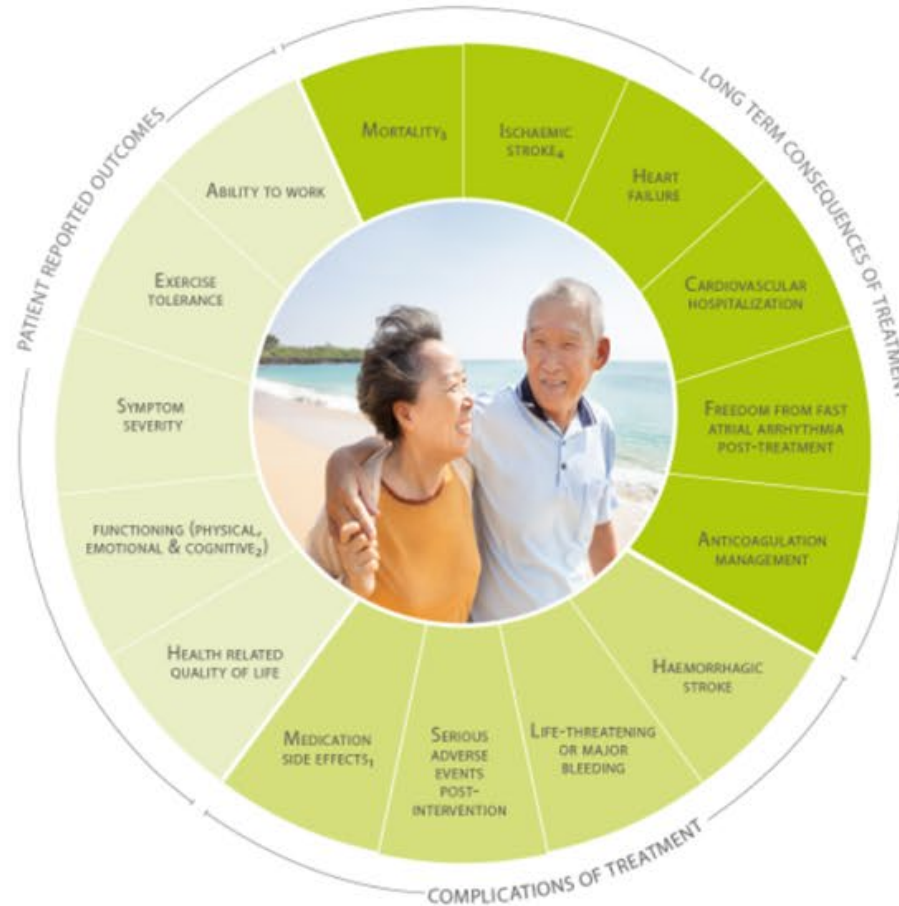

ATRIAL FIBRILLATION

COMPLETED & HARMONIZED

The ICHOM Set of Patient-Centered Outcome Measures for Atrial Fibrillation is the result of hard work by a group of leading physicians, measurement experts and patients. It is our recommendation of the outcomes that matter most to patients with Atrial Fibrillation. We urge all providers around the world to start measuring these outcomes to better understand how to improve the lives of their patients.

1. Both patient and clinician reported outcomes.
2. Both patient reported outcome and long-term consequence of treatment.
3. Mortality (all cause and cardiovascular)
4. Systemic embolism and unclassified stroke also included.
