**Partner Study**

**Mission: Undetectable**

**PARTNER Study Progress Report | 2 Years**

**The Participants**

- Heterosexual: 1140 couples
- Gay: 60%
- Other: 40%

**No of Sexual Encounters**

- One HIV+ & Undetectable
- One HIV-

**No of HIV Transmissions: Zero**

**The Results**

- Likely chance of transmission via anal sex from someone on successful HIV treatment (per year): < 1%
- Likely chance of transmission via receptive anal sex with ejaculation from someone on successful HIV treatment (per year): < 4%

**According to AIDSMAP**

When asked what the study tells us about the chance of someone with an undetectable viral load transmitting HIV, presenter Alson Rodger said:

"Our best estimate is it’s zero."

**The STIGMA Project**

Rodger A et al. HIV transmission risk through consumption of ART+ partners’ suppressive ART. PARTNER study.
